

Physics Club

Meeting 2/2/2017

General Information

ELECTIONS NEXT TIME!

Positions Available:

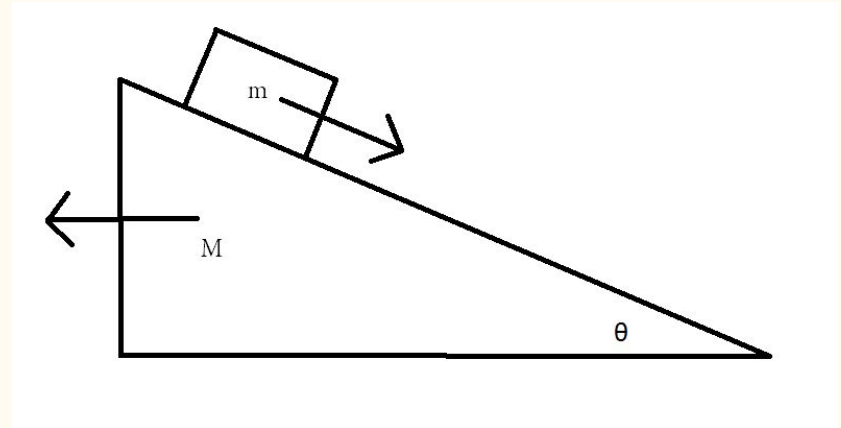

1. Secretary
2. Student Council Representative

MEETING TIMES:

Wednesday afterschool, 4:15-5:00

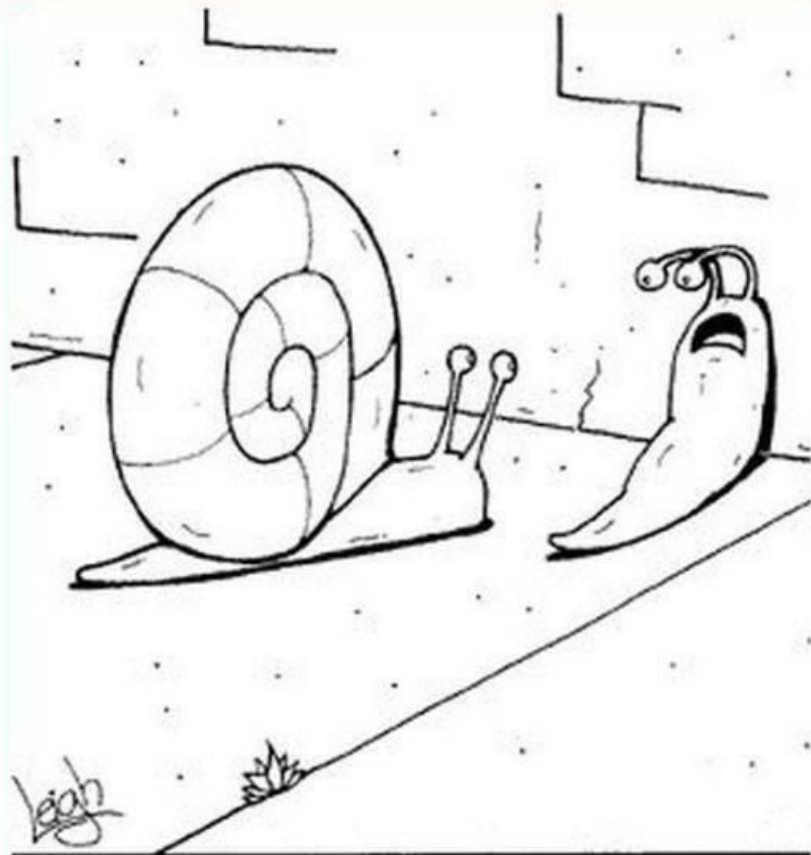

PHun Incline:

A block of mass m is held motionless on a frictionless plane of mass M and angle of inclination θ . The plane rests on a frictionless horizontal surface. The block is released. Find the horizontal acceleration of the plane.

SNAILS!

Three snails sit on the vertices of an equilateral triangle ABC of side length 60 cm. At time $t=0$, the snails start moving with speed 5cm/min in such a way that snail A is always moving directly towards snail B , snail B is always moving directly towards snail C , and snail C is always moving directly towards snail A . How much time does it take for the snails to collide?
